

Are you the parent of a healthy adolescent girl?

If your child is in good health and between the ages of 13 and 18, she could earn \$70 for participating in this 3-session study.

Researchers at McLean Hospital are investigating differences in the ways that healthy and depressed adolescents think, feel, and behave. Your child's responses can help them better understand and treat depression in adolescents.

Have you noticed your daughter feeling depressed?

If your child is between the ages of 13 and 18 and has been feeling depressed or has been diagnosed with major depressive disorder, she could earn up to \$110 and receive free cognitive-behavioral therapy for 16 weeks as part of this study on depression and brain activity being conducted by researchers at McLean Hospital.
